Chief Executive Officer

Jack Lewin, M.D.

January 5, 2007

To potential clients of SAN Business Consultants:

I would like to personally share with you my experience with working with SAN Business Consultants. Since we established a contractual relationship with SAN in July 2006, they have been a tremendous asset to our department and the growth of our data registry product development. Currently, they are leading our efforts in developing a comprehensive data collection tool, using a Service Oriented Architecture (SOA) approach, to not only streamline our product development process, but ensure interoperability, reusability, platform independence, and increased performance and data integrity, for this highly sensitive data, that must comply with HIPAA regulations. In addition, they have provided enterprise architecture consultation, Business Continuity Planning, business and technical analysis on our processes and quality assurance/quality control activities, from reviewing code, business process design and validation, to assessing our vendor certification process.

They have accomplished a tremendous amount work, in an incredibly short period of time, and every member of my team is extremely delighted in working with the associates of SAN. They have a strong work ethic, are highly professional and understand the dynamic environment of the IT industry, for both the private and public sector. I highly recommend them for any scale IT project you may consider them for. They have the perfect "can do!" attitude that works every time. As the premier data registry for cardiologists, related clinicians, researchers and third party entities in the healthcare arena in the U.S., Europe and Asia-Pacific, we have found that SAN is not constrained by their size, but excels in their agility and business acumen to meet our highly demanding industry.

Please feel free to contact me for specific examples of projects and activities they have provided for us.

Kimberly Harding
Director Technology Management
NCDR Registries and Research Division
American College of Cardiology
